

Fundory

Goal-based savings vaults with autonomous yield execution on Hedera.

3

On-chain goal modes

1

Unified app for goals,
automation, and
controls

PROBLEM

Savings users lack control and transparency

- Most savings apps hide yield logic and rebalancing decisions.
- Users cannot choose per-goal risk and automation behavior.
- Autonomous execution is usually opaque or centralized.

SOLUTION

On-chain goal vaults + agentic strategy engine

- Each goal creates a dedicated vault contract on Hedera.
- Goal mode is persisted on-chain: Max Yield, Prized Yield, Select a Strategy.
- Agent consumes external signals and strategy data to decide/execute rotations.
- Manual and semi-autonomous controls are exposed in-app.

Contracts + App + Indexer/Agent

Contracts

GoalVaultFactory, GoalVault, PrizeSavingsPool, strategies.

Frontend

Next.js + Wagmi/Viem
pages:
Overview,
Goals,
Automation,
Settings.

Indexer

Tracks
GoalCreated/Deposited/Withdrawn
and serves activity API.

Agent

Decision API
+ execute
API with
optional
Hedera
Agent Kit
path.

Bounty alignment

- Bonzo-compatible strategy routes are represented and selectable in app/agent.
- Hedera Agent Kit execution path is supported with `AGENT_EXECUTOR=hak`.
- Manual trigger + autonomous cycle endpoint provide reproducible judge demos.

End-to-end user flow

1. Create goal and choose mode.
2. Approve and deposit into vault.
3. Open Automation page and run agent cycle.
4. Verify activity and transaction evidence.

Demo video:

share=copy&fl=sv&fe=ci](https://vimeo.com/1133217800/e4b5a5ce52?share=copy&fl=sv&fe=ci)**

TECH STACK

Implementation stack

- Solidity + Hardhat
- Next.js + TypeScript + Wagmi + Viem
- Express indexer/agent service
- Hedera JSON-RPC + HashScan
- Hedera Agent Kit + Bonzo plugin integration

What is already verified

- Contract compile/build checks passing.
- On-chain mode persisted and read in app.
- Local end-to-end smoke: deploy → create goal (mode) → deposit → indexed activity.

Smoke script:

```
contracts/scripts/e2eLocalSmoke.js
```

Next milestones

- Production strategy adapters for live Hedera pools.
- Risk policy tuning and per-goal automation constraints.
- Expanded prize savings mechanics and reporting.
- Advanced analytics and multi-goal portfolio optimization.

ASK

Why Fundory should win

- Clear real-world user value: transparent autonomous savings.
- Strong technical alignment with Hedera + Bonzo + Agent tooling.
- Practical architecture with auditable on-chain state and actions.
